DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-7 and 9-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshida et al. (US5734455).

Regard to claims 1-3 and 9-11, Yoshida et al. teach (Figs. 1, 5 and 9) display panel including a first substrate having an array region and an array peripheral region, and a second substrate having a black matrix, the display panel comprising:

- a plurality of gate lines on the first substrate 11;
- a gate insulating film 16 on the first substrate including the gate lines;
- a plurality of data lines arranged to cross the gate lines, for defining a pixel region on the array region;
- a light leakage prevention film (reflective film 22 according to Fig. 1, capacitor electrode made of aluminum 222 according to Fig. 5, 323 according to Fig. 9) formed between the gate lines and/or data lines of the array peripheral region, for preventing light leakage.
- a TFT and a pixel electrode formed in each pixel region.
- the second substrate having the black matrix and a color filter layer and facing the first substrate;

Art Unit: 2871

- a liquid crystal layer formed between the first and second substrates.

wherein

- the light leakage prevention film is formed simultaneously with at least one of the gate lines according to Fig. 9 (claims 4 and 12).
- the light leakage prevention film is formed to prevent an electrical short with the data lines according to Fig. 5 (claims 5 and 16).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8 and 20-21 rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida et al. (5734455).

It is well known in the art that display panel including a capacitor metal layer to partially overlap an upper portion of one of the gate lines for increasing the aperture of pixel region and generating storage capacitance.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Art Unit: 2871

Matsuo et al. (US5414547A) disclose a liquid crystal display device with black matrices (216) made of molybdenum silicide layers also are, for each of plural pixel regions provided on a transparent substrate (209) having a matrix array.

Moon et al. (US 20030025859 A1) disclose a reflective layer forming on the pixel electrode.

Ha (US6519014B2) disclose an array substrate for a transfective liquid crystal display device.
